Memo CP-D/757

Date: 3 August 2012
To: Distribution
From: N. Otsuka, S. Babykina
Subject: Comparison between Landolt-Börnstein and EXFOR (Phase II)
Reference: Memo CP-D/725

Following the Action 30 of the NRDC 2012 to us:

Continue comparison between Landolt-Börnstein compilation and EXFOR for light charged-particle induced isotope production cross sections.

we have checked the current EXFOR Master File against the 682 articles listed in Landolt-Börnstein (LB) data book (Subvolumes 13-F,G,H and I) for light-charged particle ($p,d,t,^3He,\alpha$) induced reaction activation cross sections. We found 219 articles are missing in EXFOR.

Some of them could be compiled from other articles. To avoid duplication, we assessed the experiments described in these missing articles, and identified articles requiring creation of a new entry or revision of an existing entry. The result is summarized below. We are missing 185 experiments in EXFOR.

	Status of article	articles	(%)
	Compiled	453	66
C	Not compiled. New entry must be created.	185	27
H	Not compiled. New entry can be created (high energy data)	10	2
S	Not compiled. But the work is compiled from another article.	32	5
	The article is not available.	1	0
	The article reports quantities not defined in EXFOR.	1	0
	Sum	682	100

Articles belonging to the 2nd (C) and 4th (S) category require creation and revision of EXFOR entries, respectively. Centres are asked to assess articles and start compilation and revision of EXFOR entries. We also occasionally found compilation mistakes etc. All actions to centres are listed at the end of this memo.

In order to complete this assessment, the **IAEA Library** (Head: Ms AH WIN Daw) collected a lot of articles in journals, conference proceedings, laboratory reports etc. Our requests were often challenging for the library because bibliographical information was often incomplete and some regional publications were not well accessible. Our special thanks go to Ms Linda VIDE and her library colleagues for their professional works. The Library also understands the importance of our task, and decided to add all relevant subvolumes of LB to their collection. These books will be useful when quality of an article copy image is not satisfactory for our compilation.

Actions to Centres (2012-08-03)

Actions:

- A: The article is compiled. But AUTHOR must be corrected.
- E: The article is compiled. But its English translation information must be added.
- C: The article must be compiled in a new entry. Send its entry number to NDS (=Valentina).
- H: The article can be compiled in a new entry. (High energy data). Send its entry number (or rejection) to NDS (=Valentina).
- R: The article is compiled. But REFRENCE must be corrected.
- S: The article must be added as a secondary reference.

The first and second field gives the subvolume numbers and reference key numbers assigned in Landolt-Börnstein (LB), and they can be used when we need cross checking with LB compilation.
