Memo CP-C/289

DATE: June 28, 2001
TO: Distribution
FROM: V. McLane
SUBJECT: 4-momentum transfer

I have come across some data given in three old references given as $d\sigma/dt$ (4-momentum transfer). Data for 2 of these are given as a function of angle as well as 4-momentum transfer ($-t$), where $-t = q^2$. Since these are old data and I did not find any new data in this form, I could compile them as DA,,MSC. The third set, however, is given as a function of $-t$ in units of $(\text{Gev } c)^2$. (If anyone else has encountered such data, please let me know).

Therefore, I propose we add a new code DT to Dictionary 32 for such data, and a field heading $-t$ or q^2 to Dictionary 24. Appropriate units will also be needed.

Proposed dictionary additions follow.

Dictionary 24 (Data Headings)

-t 4-momentum transfer squared (= q^{*2})

Dictionary 25 (UNITS)

GEV ² /C ²	(GeV/c) ^{**2}	EC2
MB/GEV ² /C ²	Miilibarns/(GeV*c) ^{**2}	D4

Dictionary 32 (Parameters)

DT Differential with 4-momentum transfer squared of outgoing particles

Dictionary 36 (Quantities)

,DT Differential c/s with respect to 4-momentum transfer squared.

I have attached a sample coded entry.
