Memo CP-C/301 (Date updated)

DATE: April 18, 2002
TO: Distribution
FROM: V. McLane
SUBJECT: Modification of Dictionary 8 and 27
(Reply to Memo CP-A/124)

NNDC and NDS are currently in the process of evaluating links between the nuclear reaction and nuclear structure databases. Given the limitation on manpower, it seems illogical to duplicate the information stored in these databases. Therefore, I am making the following modification to the proposal of Memo CP-A/124.

1. Eliminate Dictionary 27, as proposed.
2. Modify the Dictionary 8, as follows:
 - Key: Z-symbol (A6)
 - Columns 1-3: integer Z (I3)
 - Columns 4-5: symbol (A2)
 - Columns 6-25: Element name (A20)
 - Columns 26-32: Range of known nuclei (I3, '- ,I3)
 - Column 34: Natural mixture allowed flag (A1).
 - Column 35-43: Isotopes not used in SF3 or SF4 (3I3).

We would add 0-G and 0-NN to dictionary 8 (1-D and 1-T need not be added as they will not exist in the new CINDA system).

The Compound dictionary would be modified to eliminate the CMP and OXI codes which may be added to any nuclide. I am also suggesting adding stainless steel.

Distribution:

M. Chiba, Sapporo	S. Maev, CJD
F. E. Chukreev, CAJaD	O. Schwerer, NDS
S. Dunaeva, Sarov	S. Takács, ATOMKI
O. Gritzay, KINR	F. T. Tárkányi, ATOMKI
K. Kato, JCPDG	V. Varlamov, CDFE
M. Kellett, NEADB	Zhuang Youxiang, CNDC
V. N. Manokhin, CJD	NNDC File

The nuclear structure databases would be used to check on whether a nuclide is stable or radioactive and whether a known isomer exists.

Examples of records in the reformatted dictionaries follow.
