## Memo CP-E/091 (Revised)

**Date:** March 24, 2006  
**To:** Distribution  
**From:** OTSUKA Naohiko  
**Subject:** Dictionary 236 (Quantities) update

We compiled experimental data from T. Hashimoto *et al.*, Nucl. Phys. **A746** (2004) 330), which gives differential cross section with respect to excitation energy of residual nuclei  $^{11}\text{B}$  ( $E_{\text{exc}}$ ) integrated over incident center-of-mass energy range [ $E_{\text{min}}^{\text{cm}}$ ,  $E_{\text{max}}^{\text{cm}}$ ]:

$$= \int_{E_{\text{min}}^{\text{cm}}}^{E_{\text{max}}^{\text{cm}}} dE^{\text{cm}} \frac{d}{dE_{\text{exc}}}$$

in  $^4\text{He}(^8\text{Li},n)^{11}\text{B}$  reaction. We propose the following addition:

### Dictionary 36 (Quantities)

, INT/DE ,RSD

B Integral over incident energy of energy spectrum of residual nucleus

Quantity	Type	Dimension	Reference	Subentry
, INT/DE ,RSD	IDE?	B	T.Hashimoto <i>et al.</i> , Nucl. Phys. <b>A746</b> (2004)330	E1933.003

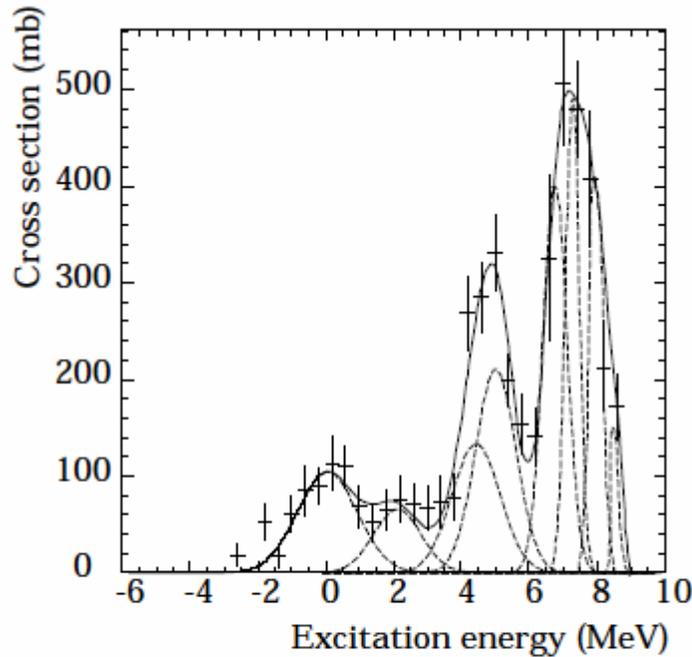

Figure 4.32: The population spectrum of excited levels in  $^{11}\text{B}$ . The horizontal axis is the excitation energy in MeV and the vertical axis is cross section summed over  $E_{\text{cm}}$  from 0.75 to 2.55 MeV. The solid curve is the result of a fit and the dashed curves show the individual components for levels of  $^{11}\text{B}$ .
